URLs checked each day during
filtering and at each user's click

23%
of organisations fell victim to a
ransomware attack in 2017

295 million
items of malware blocked
during the last 12 months

Take back control of your emails and secure your business

Email is indispensable for work, which makes it all the more vulnerable to attack and abuse. From traditional spam to more devastating ransomware attacks, your email must be secured so users can focus on their work, rather than worrying about breaches

91% of cyberattacks start with an email.

Email has become the attack vector of choice for spreading malware, ransomware, phishing, spear phishing and other types of email attacks. While spam was a simple nuisance, that is no longer the case; it has evolved into a major threat for your organisation.

360° EMAIL PROTECTION

Secure7 Mail Protect protects your email from all types of threats and attacks. Its filters identifies and categorises all emails, securing your organisation and improving operational efficiency by removing the daily tide of non-priority messages.

PREDICTIVE TECHNOLOGIES PROVIDE INSTANT PROTECTION

This solution analyses incoming and outgoing emails and filters out any suspicious messages before they land in user's inboxes. Our solution protects against all forms of known and unknown threats, including polymorphic and zero day attacks

EFFECTIVELY COMBATS ALL TYPES OF THREATS

- ✓ Anti-malware. Blocks all zero day malware, including ransomware
- ✓ Anti-mass phishing. Prevents login credential theft
- ✓ Anti-spear phishing. Disarms targeted attacks like whaling, BEC, CEO fraud
- ✓ Anti-spam. Guarantees quarantine of 99.99% of spam emails.
